Point of Care Testing in Long-Term Care Facilities

[Letter dated 9/10/2020](#)

Long-Term Care Visitation & Testing Requirement Highlights

[Long-Term Care Facility Visitation Expectations](#) 9/9/2020

Essential Caregiver (ECG) and/or Compassionate Caregiver (CC) Visitation

-Facilities are expected to have a plan for ECG/CC visitation as soon as possible. They need to communicate the expectations, timeline and plan with family members.

-ECG/CC is defined as a family member or individual identified in the residents Care Plan that provides activities of daily living (ADL) and/or Emotional Support.

-ECG/CC visits MUST be scheduled, they must wear masks and social distance from others in the facility (not the resident). They will also need to be screened.

- The facility must monitor so all mitigation measures are taken (PPE usage, social distancing, hand washing, etc.)

- ECS/CC visits may occur, even if the facility has not met the criteria of 14-days with no new cases

General Visitation

The facility must have no new cases for 14 days before general visitation may begin.

Five persons may be on the visitor list, but only 2 should come at a time.

Visits should occur outdoors (prepare for weather) or in large open areas.

Visits must be scheduled so mitigation measures may be followed and monitored by the facility.

Symptom-Based Strategy to Return to Work

Key Messages from Dr. Rivkees concerning the new [CDC's Symptom-based strategies to Return to Work](#) Research shows that the PCR test is very sensitive and a person can test positive for up to 3 months, but they are no longer infectious. The CDC has released new guidance for a return-to-work symptom-based strategy.

If you :

- are COVID positive, but asymptomatic, you should isolate for 10 days.
- have mild symptoms, you may return to work if at least 10 days have passed since symptoms first appeared **AND** at least 24 hours have passed since last fever without medications **AND** symptoms have improved.
- Had severe to critical illness **OR** are severely immunocompromised, you may return to work at least 10 days and up to 20 days after symptoms first appeared.
- At least 24 hours has passed since last fever without medications **AND** symptoms have improved.
